NiCE Interaction Analytics and Quality Central Installation– Exercise Book

Contents

NiCE Interaction Analytics and Quality Central Installation– Exercise Book	1
1 – Platform Validation Tool	2
2 – Strategy	2
3 – Install Interaction Analytics and Quality Central	3
4 – Install the English Language Pack	3
5 – Initial Configuration	3
6 – Configure the Nexidia Management Console	3
7 – Create MSTR Database and Project.....	4
8 – Upgrading NIA + QC	4
9 – SQL Jobs	5
10 – Install Artemis	5
11 – Register MediaStylesheet.....	5
12 – Installing the Search Grid Servers (Use Search Grid 3.x).....	6
13 – Using the System.....	6
.....	6

This Exercise Book follows the Hands-On Exercises presented in the Course Book. Here are the accounts used for these exercises.

User	Password	Description
nicetraining\niceuser	nicecti	Used to access the Lab Hopper machine.
nicetraining\niceservices	nicecti	Runs the NIA, QC, and MSTR services
nicetraining\niceadmin	nicecti	Administrative account to log on to the servers
superuser	password	Superuser account for the Applications

New Installation

Details	Description
Applications Server:	NIA
Database	NXDB1
Search Grid	GRID1, GRID2, GRID3
NxDeployer Server	GRID1

1 – Platform Validation Tool

This section validates the system environment on NIA, NXDB1 and all the GRID servers by running the Platform Validation Tool.

1. The executable to run is in **D >NICETECH** folder
2. You can save the created inventory file in a shared location so that you can reuse it on each server to run the tool.

2 – Strategy

This section installs the Strategy release version component on the NIA server using NXCumulativeUpdater tool.

MicroStrategy is now known as Strategy. But there are references as MicroStrategy in the software installation as the changes have not been made internally

1. The software should be installed using the Cumulative Updater located in the **D > NICETECH** folder.
2. MSTR SW folder location - D:\nicetech\NIA
12.5\Strategy_25.03\Strategy_25.03_IntelligentEnterprise_Windows_11.5.0300.0238
3. License location : D > nicetech
4. The lab does not have access to the Internet. In the Lab environment, we will not activate Strategy.

3 – Install Interaction Analytics and Quality Central

This section installs the NX QC components on the NXDB1 and NIA servers.

5. Install the package on the NXDB1 server first.
6. Once installed, repeat the procedure on the NIA server.
7. Activate the SW using the License file, not the Entitlement ID (EID).

4 – Install the English Language Pack

This section installs the English Language Pack software.

1. Install the Language Pack on the NIA Server.

5 – Initial Configuration

Perform the following configuration on the NIA Server.

1. Add the NxMediaCache Virtual Directory in the IIS Manager and point it to the ReplayService_Transcode_Cache folder.
2. Use the Configuration Wizard to update the configuration service, database connection string, and enable the NIA / IIS / Microstrategy Services to auto-start.

6 – Configure the Nexidia Management Console

This section configures the parameters required for Interaction Analytics and Quality Central. Using the Nexidia Management Console, update the required configuration parameters.

1. Update the Localhost to NIA
2. Set the value of parameter **Nexidia.Enterprise.ServerSideBrowseStartPath** and set the path to **\\NIA\Production Media**
3. Filter the parameter **ForensicSearch.FileDownloads.TempFolderUNCShareName** and set the value to **\\NIA\ForensicSearch Download Temp Share Folder**
4. Filter on SearchGrid and change the following parameters:
 - **Nexidia.DiscoverySearchGrid.SystemUri.**
 - **Nexidia.SearchGrid.SystemUri.**

5. Update the **Nexidia.DiscoverySearchGrid** Tenant and Password **from DefaultTenant to DiscoveryTenant**
6. Update the **Nexidia.Enterprise.IngestServer.LanguagePackPath** to **D** drive
7. Set the value of **Nexidia.Enterprise.IngestServer.FileSystemScanningEnabled** to **True**.
8. If needed set the value of scanning interval by selecting value of the **Nexidia.Enterprise.IngestServer.FileSystemScanningInterval** parameter
9. Set the value of **cfgMstrRootUserGroupName** to **NexidiaUsr**.
10. Set the value of **cfgMstrServer** to the name of the server hosting the MSTR Intelligence Service- **NIA**.
11. Set the **cfgMstrProjectName** and **cfgMstrProjectSourceName** to **NexidiaESI**.
12. Set the value of **Deployment.DatabaseServerComputer** to **NXDB1** for the five Deployment parameters. (Search for Deployment in the Filter)

Ensure these values are entered the NIA upgrade process will otherwise fail

7 – Create MSTR Database and Project

This section creates the MicroStrategy and Project files used by NIA and QC.

1. Using the Reporting Configuration Tool, create the MSTR Database (NxMstrMetadata) and Project (NexidiaESI)
2. NIA Services must be restarted before running the RCT tool for Strategy.
3. Restart attempt is failing because a server reboot is required.
4. NIA Services do not initialize via the Configuration Wizard.
5. A clean reboot of the server is necessary to proceed.
6. After running the tool, update the MicroStrategy Web Administrator.

8 – Upgrading NIA + QC

This section installs the latest Service Packs and Quick-Fixes on the NIA + QC Deployment. Use the NxDeployer to install these updates. **NOTE: The NxDeployer and the relevant SW can be found on GRID1. The NxDeployer Agent Service SW is located on the relevant servers.**

1. Put the system into Maintenance Mode using NxDeployer
2. Perform the upgrade while the system is in maintenance mode.
3. Once the upgrade is complete, remove the system from Maintenance Mode via NxDeployer
4. Create a shared folder named **NxDeployer.Coordinator** on GRID1
5. Install the NxDeployer Coordinator on GRID1.

6. Install the NxDeployer Agent Service on NIA and NXDB1.
7. Create an Actions > Analytics > Upgrade MOP Options.

9 – SQL Jobs

This section manages the SQL Jobs used by NIA + QC.

1. Using the Nexidia Management Console, enable all the jobs.
2. On NXDB1, access SQL Server Management Studio and configure the following jobs:
 - Enable NESI-Evaluations-AgeData
 - Disable NIA-Core-Cleanup

10 – Install Artemis

This section installs and configures Apache ActiveMQ Artemis

1. Open NxDeployer Terminal in GRID1
2. Edit **runsettings.json** to list target servers(nia).
3. Edit runsettings.json to list target servers

```
{
  "Servers": {
    "NIA": {
      "InstallDrive": "D:/",
      "DataDrive": "D:/",
      "LogsDrive": "D/"
    }
  }
}
```

4. NxDeployer Terminal, go to:
 - Actions > Analytics > Artemis > Install**
5. In the Configure Artemis Install MOP Parameters window, enter Artemis location and service account login
6. In the After installation, configure Artemis parameters in the Management Console

```
Nexidia.Artemis.ConnectionPort -47500
Nexidia.Artemis.ConnectionString-nia
The username &password for connecting to Apache ActiveMQ Artemis
Nexidia.Artemis.password -admin.
Nexidia.Artemis.username -admin.
Nexidia.Artemis.UseSSL -false
```

11 – Register MediaStylesheet

Register the stylesheet for ingesting the interactions with the metadata within the management console

1. Open command prompt in NIA server
2. Navigate to navigate to D:\Program Files\Nexidia Analytics\ManagementConsole
3. Run the following command:

```
.\NxManagementConsoleCommandLine mediaStyleSheet -op:set "-path:D:\nicetech\NIA
12.5\MediaFileStyleSheet.xml"
```

12 – Installing the Search Grid Servers (Use Search Grid 3.x)

Perform the following configuration on each of the Search Grids.

NOTE: the relevant Search Grid SW can be found on each GRID server in the NICETECH folder. The license file, however, will need to be copied from the NIA server.

1. GRID1 – Install as a Single-Server. Install the Language Pack.
2. GRID2 – Install as a Gateway and Control Node. Install the Language Pack.
3. GRID3 – Install as a Data Node.
4. On GRID1, use the Search Grid Management Console to administer:
 - Discovery Tenant
 - Language Pack
 - Phrase Pack

13 – Using the System

The following tasks will need to be performed using the NIA + QC Application. Login to the Main Portal (<http://nia/nxia/main>). Use the Superuser account for all activities unless otherwise specified.

NOTE: Before beginning, make sure to update the metadata in the Billing folder to include at least 2 dates from the last week.

1. Remove restricted access from the management console
2. Leave the maintenance mode from Management Console(Usually NxDeployer will exit Maintenance mode).
3. Installed Languages - add the English Language Pack
4. Term Queries - add a Search Term
5. Queries – import the English Queries
6. Session Management – create a new Session and point it to the Billing media folder
7. Target Media Sets – create a new TMS and associate it to the Session
8. Discovery – use the Media Set Administration to add the TMS to Discovery
