

## Adding a Knowledge Base Entry

Knowledge base entries are resources that can be sent to agents during the coaching process. When you select a knowledge base entry from the Knowledge Base grid on the Main Knowledge Base window, the Details panel on the right displays its description and Where it's Used. If the knowledge base entry is actively in use, it cannot be deleted.

To add a Knowledge Base entry:

1. Go to Administration > Knowledge Base.

2. Click New.

View image

Add Knowledge Base Entry

3. In the **Type** dropdown, select one of these knowledge base types.
  - Document - Select this option to upload a document file. When you select this option, you must select a file to attach.
  - Link - Select this option to enter the URL for a link in the Link field. Click the Test link button to verify the URL address.
4. In the **Name** field enter the name. If this knowledge base entry is referenced as a required action for a coaching

session in Evaluations, then the name displays as "Evaluation Form <ID>: <agent name>".

5. In the Category, enter the category, which is used to help you manage the various artifacts. You can enter a character string into the Category to display a list of all categories that contain the character string you entered. If you enter a string that has no category matches, the list is hidden and the application creates a new category that is named what you entered in the Category.
6. In the Summary, enter summary information.
7. Click Add.
