

Product lifecycle policy update

Nexidia Analytics and Quality Central

NICE Nexidia is updating its Product Lifecycle Policy in order to maintain proper product lifecycle management. This policy replaces all previous product lifecycle, end of life, or sunset policies, documented or implied.

Why we update our policy

Planning ahead to save you time

Products reach the end of their lifecycle for various reasons, including technology refresh, technology innovation, changes in market demand, or simply maturation over time. Nexidia products, therefore, are replaced by richer functionality and technology. While this is a standard part of the product lifecycle, Nexidia recognizes that product end-of-life milestones enable customers to review their long-term plans and take all of the necessary steps to be ready for essential upgrades on time.

Staying current keeps you at your best

Nexidia's updated Product Lifecycle Policy is designed to help customers better manage their transition to the latest Nexidia solutions. The Product Lifecycle Policy and Nexidia

Maintenance Program, which includes upgrades, ensures that customers stay up-to-date with the most recent capabilities and technology available from Nexidia via software updates and upgrades.

This updated Product Lifecycle Policy describes the process, terminology, and applicability to different Nexidia products and versions. The policy articulates the end-of-expansion sales date to provide sufficient advance notice in order to ease migration to a newer release while also enabling enough business flexibility until the upgrade takes place.

Product lifecycle policy principles

The Nexidia Product Lifecycle Policy seeks to provide transparency into the life cycle stages of each product release, thus enabling each customer to effectively manage their deployment(s) of Nexidia product(s). As such, the policy addresses the following:

Product lifecycle terminology

Product Lifecycles and the terminology used to describe them can vary from one provider to another. Below are some of the most important terms that sometimes can vary and how Nexidia defines them in this context.

End of life: The cessation of support for the product because Nexidia or a third-party vendor will no longer provide new features, improvements or technical assistance for that product. May be referred to as "Sunset."

Product: An individual offering, system subset, suite of hardware, and/or software components that form part of a packaged or customized solution.

Version: A specific edition of a product as indicated by its number, normally in the format of Nexidia Product Release x.y. The x designates a major release and y designates a minor release. (A product may or may not include a product version number. The term 'product version' in this document refers to both products with a version number and products without version numbers.)

Major release: A release containing major new features, enhancements and developments over the previous release architecture (e.g. Nexidia Analytics v12).

Minor release: A release containing minor new features/enhancements (e.g. Nexidia Analytics v12.1).

Cumulative update: A bundled group of software updates released on a regular basis in the form of the "Cumulative Update Utility." A separate update utility is issued for each Nexidia product version. Update utilities are numbered sequentially for each version and each contains the updates of all previous update utility releases issued for that version. Each update utility is given a unique identifier using the format x.y.z (x designates a major release; y designates a minor release, and z designates the update utility version).

Product and support lifecycle stages

Each Nexidia product release moves through stages, from initial release to end of life. This cycle allows improvements to be made on currently available versions, while also moving development forward for newer versions that eventually supersede the existing ones. Here are the lifecycle stages defined and used by Nexidia to manage each release through to its end of life:

1 CGA (Controlled Generally Available)

Available with approval from Nexidia Product Management and fully supported.

2 GA (Generally Available)

Generally available without restriction and fully supported.

3 End of (new) sales date

The final date when a product version will be available for sale to a net new customer. After this date, it will not be possible to order new systems of the release.

4 End of expansion (add-on) sales date

The final date when a product version, hardware or software, can be expanded within the same product version in an existing installation. After that date, Nexidia will not allow adding licenses or capabilities to an existing deployment.

5 End of mainstream software support date

The date after which Nexidia will cease to provide code fixes, software updates and

Initial setup & expansion period

Allows existing customers sufficient time to plan expansion of their current solution for minimal disruption of business operations

Nexidia maintenance period

Offers professional and cost-effective end-to-end maintenance, world class support, and the latest software updates/upgrades

Software version support period

Encourages customers to upgrade to the latest release and updated version

changes to product version. (NOTE: Nexidia does not support proactive development for new environments such as proactive language pack certifications and third-party software certification for versions already released.)

6 End of critical software support date

The date after which Nexidia will cease to provide critical code fixes and changes for a product version. After this date, requests for Microsoft security patches, security advisory patches, daylight saving updates and service packs, as well as Internet Explorer update certifications will require an upgrade to a newer minor/major release.

7 End of service support date

The date after which Nexidia will cease to provide technical support, on-site support, help desk support, and training for a product version. Though the end of life milestones for a specific product version may vary, in general, Nexidia plans to provide mainstream support for a minimum of two years after release of the product version, extended/critical support for a minimum of two and a half years after release, and service support for a minimum of three years after release.

Product lifecycle schedule

Below are the currently announced end of life products and the schedule for each end of phase. Schedule announcements are regularly communicated. To ensure you receive these announcements or to schedule an upgrade, please contact your sales representative.

	Version	General Availability	End of Sales	End of Expansion Sales	End of Mainstream Software Support	End of Critical Software Support	End of Service Support

Support lifecycle FAQ matrix	Mainstream software support	Critical software support	Service support
Do I have access to Technical Support?	Yes	Yes	Yes
Can I expect Service Request (SR) Handling?	Defect repairs	Defect repairs for critical* SRs only (delivery as part of “Cumulative Update Utility” releases)	Help desk & tier support. No code changes.
Will third-party software certifications be supported?	Yes	Code fixes to support Microsoft security patches, security advisor patches, daylight saving updates, and service packs, as well as breaking Internet Explorer security updates. This excludes certification for new releases of Windows OS, SQL Server, .NET, Internet Explorer and other third-party pre-requisites that are proactively certified by Nexidia.**	No
Will proactive certification of language packs continue?	Yes	No	No

*Critical = based on severity and priority. **Validation of the above mentioned software ceases when Microsoft no longer supports the respective operating system required to run this product version (for example, when Microsoft ceases to release patches and service packs for the operating system in question). ***Quality Central Insight has been discontinued after v12.3 and is not available with v12.4.
