

Evaluating an Agent

Evaluators are assigned interactions to evaluate by workflow queues. See [Guidelines for Evaluating an Agent](#) to learn more. You can choose to send the agent coaching feedback at any point while you are evaluating them. When you save the evaluation, the Coaching button displays. Click **Coaching** to send a coaching package to the agent. Note that the Coaching will still apply even if you cancel the evaluation. See [Coaching](#) to learn more. The question, category, and evaluation level notes only display if the template is configured with the view or edit notes access rights.

You can evaluate an agent either [manually](#) or [automatically](#). The following table outlines the key differences between the two approaches.

Manual	Automatic
Requires active user intervention at each step—evaluators must select interactions, apply scores, and publish results individually.	Operates without manual input—interactions are selected, scored, and either published or saved as draft based on system-defined logic.
Allows immediate editing during the evaluation process.	Evaluations can be reviewed and edited later if configured to save as drafts.
Requires opening and reviewing each interaction individually.	Processes all the interactions in the target media set based on the workflow criteria defined and evaluates each interaction.

Evaluating an Agent Manually

To evaluate an agent:

1. In Forensic Search, go to the Workflow Dashboard or perform a search for interactions.
2. Select the interaction to evaluate.

Items: 1 - 50 of 1233

Page 1 of 25

If you evaluate an agent without media, the ingested metadata associated with the agent does not show in the evaluation form. The only metadata shown is agent, evaluator, and date/time.

3. Click Launch Evaluation Form

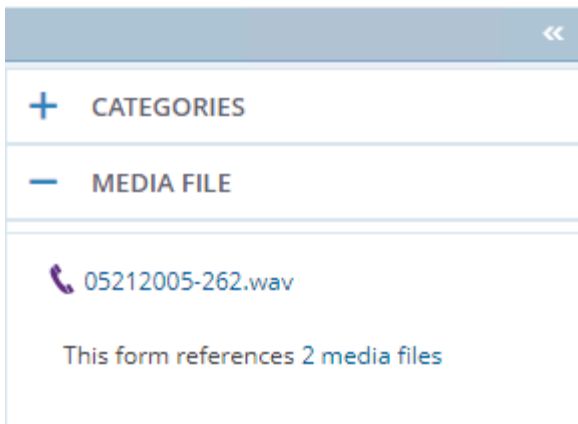

to initiate an evaluation. You can also click Evaluate in the [Play Interaction window](#) to initiate an evaluation. See [Playing Back Interactions](#) to learn more.

View image

4. Follow these steps to choose a template for the evaluation:

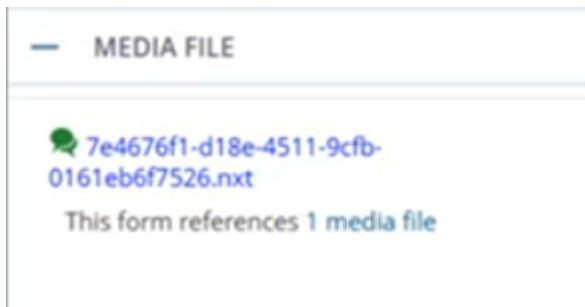

- Click **Change** and then Select to select the desired template.
- If only one template is in the system, it is selected.
- When multiple templates are available, the system automatically selects the one you used last.
- The page loads the selected template, displaying the primary media file name and an image representing the interaction type (All, Audio, Chat, Email, or Text) in the Media File area. The Media File area is located in the left lower side of the evaluation form. You can see the total number of files connected to the evaluation here.
 - If there are secondary media files associated with this evaluation, This form references <n> media files displays. You can click the <n> media files link to launch Search and load each of the files (including the primary file) associated with this evaluation. You can view or listen to the interaction file associated with this evaluation as needed. See [Playing Back Interactions](#) to learn more.

View Image

- Chat evaluations with screen recordings - You can click the media file name in the media file area to launch the Pluggable Player with chat interactions and agent's screen recording. See [Playing Back Interactions](#) to learn more. The Pluggable Player is not accessible through the <n> media files or external player links. Launching the Pluggable Player offers the following benefits:
 - Provides a comprehensive view of chat interactions allowing reviewers to simultaneously analyze the agent's screen actions and chat conversations in a unified, interactive playback experience. This leads to more accurate and efficient evaluations.
 - Solves the timestamp tracing issue for multiple chats. Earlier, clicking a chat only opened chat bubbles, making it difficult to trace actual timestamps in recordings with multiple chats. Now, when a user clicks a chat with screen recording in the evaluation form, the Pluggable Player launches, aligning chat content with visual context.

View Image

- The Metadata area located on the left lower side of the evaluation form displays any metadata configured for the selected template.
5. Answer the questions for the selected category in the Category grid. You can use the View as single page option to list all questions from all categories on one page. This will eliminate the need to navigate through categories. If the total number of questions on the evaluation form exceeds 200, this option will be disabled. You can fill out the evaluation form manually, or use the Enlighten Gen-Insights for Quality Central feature to answer questions using LLM.

Enlighten Gen-Insights for Quality Central Prerequisites

- The Enlighten Gen-Insights for Quality Central feature is only available for users with the AutoEvaluate license.
- Set the Nexidia.Evaluations.EnableAIAutoSuggest and Discovery.AutoDiscovery.Enabled parameters to true in the Management Console. Ensure the Discovery service is running.
- Ensure you have Evaluate – Manage AI Auto-Suggest and Evaluate - Allow AI Auto-Suggest Evaluations privileges.
- Set the Enable AI Auto-Suggest template settings to Yes and provide a prompt in the Add a prompt to set the context for AI processing area.
- Select the Mark for AI Suggestion option and provide a prompt when creating or editing a question in the Evaluation Form Template.
- Ensure transcripts are available for selected interactions.
- Select the **Show AI Notes** option when creating or editing a question in the Evaluation Form Template to populate notes automatically on the form.
- Set the Pre-process Transcript template setting to Yes to pre-process the transcript before evaluating.

Enlighten Gen-Insights for Quality Central Use Case

Jim Bush is an Evaluator, who wants to quickly evaluate agent Robert Burke. Jim selects Robert's interaction, which has a transcript available. He launches the evaluation form and chooses a template. He then clicks the AI Auto-Suggest button to use the Enlighten Gen-Insights for Quality Central feature. The questions are answered by analyzing the transcript using Large Language Models. Jim can also override the answers if needed. Jim then publishes the evaluation. This process saves Jim time, allowing him to evaluate Robert's performance quickly. Using Enlighten Gen-Insights for Quality Central

You can use the Enlighten Gen-Insights for Quality Central feature to answer the questions by analyzing the transcript using Large Language Models (LLM). This lets you fill out the form quickly and efficiently. It works only for calls with transcripts and supports all question types, including Yes, No, N/A, List, Text, Numeric, Bonus, Deduction, and Multi-Select List.

You can mask the personal/sensitive information in the transcript before sending it to LLM. To mask the personal/sensitive information within the transcript, you need to enable Management Console parameters. You can also pre-process and refine the transcript before sending it to LLM by enabling Management Console parameters.

Using Enlighten Gen-Insights for Quality Central Feature

To use this feature, click the AI Auto-Suggest button on the evaluation form. For each AI-generated response, a comment is provided to explain the reasoning behind the suggested answer. An evaluator can override the suggested answer.

6. While answering questions, if a hint has been provided for a question, a Hint link displays next to it.
 - Add notes as relevant. The maximum length is 2500 characters. The number of lines to add notes in the Notes area can be configured from the Management Console. By default, 5 lines are provided for adding notes.
 - Enter points for questions, the score initially displays as Score: 0/0 unless the template has default answers. The assigned point values for List, Multi-select List, N/A, Yes, and No questions can be positive (+) or negative (-), as defined by the system administrator. When a negative point value (i.e.: -4) is assigned, it is reflected accurately everywhere except in report score averages. Negative scores in reports are counted as zero. Analytics processing might suggest some answers for you. But, certain answers can lead to the failure of the current category or the entire evaluation. If this occurs, a warning message appears. When an answer causes an auto-fail, the question's text turns red and italic in the evaluation form, making it easy to identify the question(s) responsible for it.
7. Create a note for the selected category in the Notes for <category name> box. You also can cut and paste content from a Hint (if available) or upload a file. You can add a text up to 10000 characters. Click the Maximize  icon to add the complete text in the notes.
8. To advance to the next category, select Next: <category name>. You can navigate between categories by either selecting the Previous or Next links or by selecting the desired category in the Categories box. The Next and Previous links will be displayed only if the **View as single page** option is not selected.
9. Complete Step 6, Step 7, and Step 8 for the remaining categories.
10. Create a note for the entire evaluation in the Notes for entire Evaluation. You can also cut and paste content from a Hint (if available) or upload a file. You can add text up to 10000 characters. Use the Maximize

icon to add the complete text in the notes.

11. To upload files related to the evaluation, click Upload a file. You can upload a file of up to 2 MB. The default supported file extensions are .doc, .docx, .xls, .xlsx, .pdf, .jpg, .jpeg, .bmp, .png, .ppt, .pptx, .txt, HTML (.html, .htm). The system administrator can also set other file extensions in the management console.
12. To associate an agent with the evaluation, select or deselect Allow Agent access (when Published). The system default value is true. If an agent is associated with an evaluation, a link for that agent to the right of the Allow Agent access (when Published) checkbox, their last evaluation score, and last evaluation date are displayed. The LastName, FirstName, and (Agent ID) are displayed. If no agent is associated, none is displayed. You can click on the [x] next to the Agent Name link to remove the association between this evaluation form and the agent. The Agent Name link is replaced with none. You can change the agent association by clicking on the hyperlink.
13. In the Grant access to field , the agent's supervisor is assigned based on interaction data. If there's no interaction, no supervisor is assigned. To give access of the evaluation to the supervisor, choose the agent's supervisor from the Grant access to field, which shows supervisors from the agent inventory. If the supervisor in the Forensic search does not match the supervisor in the agent inventory, the Grant access to field will be blank. In this case, the evaluator must manually select the supervisor. The user must have the right to view the template used for the evaluation. As you type, matching names will display below the text box for selection. When typing at least two characters, search results will display for Login Name, Last Name, or First Name, but not combinations of these.

Evaluation Access Scenarios

- If a user has template access, the Evaluate Access All Evaluations privilege, data or hierarchy restrictions are not applied, and access is not granted in the Grant access to field, the user can see the evaluation on My Evaluations page.
- If a user has template access, data or hierarchy restrictions are applied, access is granted in the Grant access to field, and does not have the Evaluate Access All Evaluations privilege, the user can see the evaluation on My Evaluations page.
- If a user has template access, the Evaluate Access All Evaluations privilege, data or hierarchy restrictions are applied, but access is not granted in the Grant access to field, the user can see the evaluation on My Evaluations page as per data restriction or hierarchy restriction.
- If a user has Overrides Access Rights privilege, data or hierarchy restrictions are applied, but access is not granted in the Grant access to field, the user can still see the evaluation on the My Evaluations page irrespective of data restriction or hierarchy restriction. If two users are associated with the same Site and Supervisor, then while evaluating the user with media Select Supervisor window will be displayed where you need to manually select the correct supervisor.

View Image

Select Supervisor

The following application users are configured to match Site: Tampa/ Supervisor: Jim Bush. If you would like one of them to have access to this Evaluation form, select that user below:

- Bush, Jim - (jbush)
- Graves, Misha - (mgraves)

CONFIRM **CANCEL**

14. To send a self-evaluation request to the agent when you select Publish, Save, or Save & Close, select Send for Self-Evaluation. The agent associated with the evaluation sees the self-evaluation in the Agent Evaluations Portal grid. If you initially sent this evaluation for a self-evaluation, your only option is to deselect Send for Self-Evaluation if the agent has not yet begun the self-evaluation. Self-Evaluations IDs are prefaced with the letter S.
15. Select Allow interaction file playback to allow the agent to view or listen to the interaction. This checkbox does not display if playback in the Evaluations Portal is configured to be off. If the associated configuration setting is configured as False, but playback in Evaluations Portal is configured to be on, this checkbox is disabled and selected.
16. If you click Save & Close before publishing, the Time to Publish message displays.
View image

Information

The Evaluation Form (ID = 2302) was successfully saved.

The time to publish is still on and counting. To stop the Time to Publish counter, clear the Add Draft mode time in Time to Publish checkbox under Settings.

☐ Don't remind me the above message again.

OK

The evaluation time still gets counted and added to the ongoing Time to Publish counter until the evaluation is

published. Clear the Add Draft mode time in Time to Publish checkbox under QC Administration > Settings to count only the edit mode time for an evaluation and not the saved draft mode time. The Time to Publish message is displayed only when the **Add Draft mode time in Time to Publish** checkbox is selected. The change in the checkbox selection does not change the time to publish calculation method for the evaluations that are complete or in progress.

17. After you have completed all required questions in the evaluation form, click Publish. The agent receives a notification in their inbox to acknowledge the evaluation, and an entry for the published evaluation form is added to the grid in the My Evaluations tab.

Evaluating an Agent Automatically

You can evaluate an agent and publish the [evaluation automatically](#) or [save it as a draft](#).

Benefits

- Automates and scales QA with minimal manual effort.
- Speeds up the evaluation process.
- Ensures consistent, unbiased scoring across interactions.
- Enables broader sampling of agent interactions.

Prerequisites

- AutoEvaluate license.
- Set the Nexidia.Evaluations.EnableAIAutoSuggest and Discovery.AutoDiscovery.Enabled parameters to true in the Management Console. Ensure the Discovery service is running.
- Set the Enable AI Auto-Suggest template settings to Yes and provide a prompt in the Add a prompt to set the context for AI processing area.
- Select the Mark for AI Suggestion option at question level and provide a prompt when creating or editing a question with reformatting instructions in the Evaluation Form Template for all question types. See Prompt example for evaluating an agent automatically in Guidelines for Evaluation Form Template Questions.
- Set up category-weighted templates with the Allow N/A option enabled for all question types.
- Configure the workflow.
- Ensure transcripts are available for selected interactions.

Publish Automatically

Using AI-powered Gen-Insights, evaluations can be completed and published automatically without human intervention. Once configured in the workflow, the system selects interactions, applies AI scoring, and publishes results under a system-assigned evaluator called System User. This reduces manual effort and speeds up the QA process.

How it Works?

1. In the Evaluate step of Workflow in Nexidia Analytics Administration, select the AI template and the Enable AI - Auto Suggest to answer the selected template and Publish the Evaluation option. See the Interaction Analytics *User Guide*>*Edit a Workflow* section to learn more. The system automatically selects interactions based on workflow rules.
2. Gen-Insights scores evaluations using the configured AI template.
 - If the LLM cannot select an answer from the template, N/A is selected by default, and the evaluation will be published.
 - Supports jump or show branching in templates.
 - The transcript is always pre-processed before evaluation, even if the Pre-process Transcript template setting is turned off.
 - Avoid enabling both Notes Required and Hide AI Notes options together, as this creates a conflicting configuration. If both are enabled, the Evaluation form will be published with empty notes and will display a red border in the notes text area when it is opened.
 - The Hide from Agent option is disabled.
3. Evaluations are completed and published automatically. You can view published evaluations in [My Evaluations](#). The evaluator is listed as System User. You can review and edit evaluations based on your privileges and hierarchy.

Save a Draft

Using AI-powered Gen-Insights, evaluations can also be saved as drafts. This lets human evaluators to review and edit AI-generated responses before publishing. It offers a balance between automation and human oversight, making it a recommended best practice.

How it Works?

1. In the Evaluate step of Workflow in Nexidia Analytics Administration, select the AI template and the Enable AI - Auto Suggest to answer the selected template and save a Draft of the Evaluation option. See the Interaction Analytics *User Guide*>*Edit a Workflow* section to learn more. The system automatically selects interactions based on workflow rules.

2. Gen-Insights scores evaluations using the configured template.

- If the LLM cannot select an answer from the template, N/A is selected by default, and the evaluation will be saved as a draft.
- Supports jump or show branching in templates.
- The transcript is always pre-processed before evaluation, even if the Pre-process Transcript template setting is turned off.
- Avoid enabling both Notes Required and Hide AI Notes options together, as this creates a conflicting configuration. If both are enabled, the Evaluation form will be published with empty notes and will display a red border in the notes text area when it is opened.
- The Hide from Agent option is disabled.

3. Evaluations are saved as drafts. To view them, go to [My Evaluations](#) and filter by Evaluation Status>Draft. The evaluator is listed as System User. Human evaluators can review, edit, and publish the draft manually.
