

Assigning a Tag to an Interaction

You can assign or un-assign an existing tag to associate it with an interaction file from the Manage Tags list in Administration. To learn how to add notes to an interaction, see [Adding Notes to an Interaction](#).

When you un-assign a tag, it disconnects from the related interaction file. But, it continues to be present in the Manage Tags list of the Administration and the Tags tab under the Search.

To assign a tag to an interaction:

1. Select the interaction file.
2. Click Notes & Tags.
3. Check the checkbox beside the tag you want to assign to the selected interaction.
