Introduction

Nexidia Data Exchange Framework is used to manage file movement and processing of data from customer locations to the Interaction Analytics secure environment. Simplified processing is provided for extracting the necessary data from customer sites, and to allow for easy reporting of system issues when they occur. This document lists the requirements for installing Nexidia Data Exchange Framework.

Important

Requirements differ based on call volumes. Please consult your Interaction Analytics technical support representative to determine the specific requirements for your implementation.

The application consists of an Administration server and a Worker server. These can be deployed in a single server deployment model or a distributed server deployment model in either a hosted or dedicated environment. An example of a typical deployment is to have one Administration server with many associated Worker servers. The Worker servers report state and status information to the Administration server via a heartbeat message.

DOCUMENT REVISION HISTORY

SFTWARE VERSION	DATE	DESCRIPTION
12.5 FP1	May 2025	• Single Server Deployment Model on page 7, Distributed Server Deployment Model on page 9, Worker Server Requirements on page 11 • Updated the required Java Runtime Environment Server version from Version 17 to Version 21. • Updated the supported operating systems to include Microsoft Windows Server 2022.
12.5	December 2024	There were no updates in this revision.

Antivirus Software Rules

Make sure that you follow these rules:

- Exclude Data Exchange Framework (DEF) installation directories and files from the scan.
- Exclude all storage locations for data related to DEF (including any external folder that DEF is using in any of its process designs) from the scan. For example, exclude all SQL, Media, and Grid storage locations.
- Perform only static scans when scanning media files. Do not perform a real-time scan.

[This page intentionally left blank]

Single Server Deployment Model

In a single server deployment, both the Administration server and Worker server are on the same machine.

The minimum requirements for a single server deployment for Windows are listed in the following table. These requirements apply for both physical and virtual machines.

COMPONENT	MINIMUM REQUIREMENT
Processor	Four 2 GHz or higher (x64) CPU cores (Intel® Xeon® processor preferred)
RAM	16 GB
Hard Drive	100 GB
Network Interface	1 GB
Operating System	One of the following: • Microsoft Windows Server 2022 • Microsoft Windows Server 2019 • Microsoft Windows Server 2016
Java Runtime Environment Server version (Required when using an external JRE)	Version 21
Browser	One of the following: • Chrome 84 and above. • Edge 84 and above.

COMPONENT	MINIMUM REQUIREMENT
Database	One of the following: • Microsoft SQL Server 2022 • Microsoft SQL Server 2019 • Microsoft SQL Server 2017 The corresponding SQL Express version is also supported for the supported full versions. NOTE: • External databases (for resources, etc.) must accept TLS 1.2 connections. • When creating a database, select the Recovery Model as Simple. Selecting Simple in the Recovery Model prevents the database from running out of free space or filling the disk drive with inactive SQL transaction logs. • SQL Server Express is supported, but not recommended due to the limitations of the maximum size.
Other Software	• (Optional) Interaction Analytics VoiceGrid Version 2.0 with RabbitMQ 3.9 compatibility. This is required for Redaction. See the <i>Interaction Analytics Voice Grid System Requirements</i> for more information.

Distributed Server Deployment Model

In a distributed server deployment, the Administration server and the Worker server reside on separate servers.

The minimum requirements for a distributed administration server deployment for Windows are listed in the following table.

COMPONENT	MINIMUM REQUIREMENT
Processor	Four 2 GHz or higher (x64) CPU cores (Intel® Xeon® processor preferred)
RAM	16 GB
Hard Drive	100 GB
Network Interface	1 GB
Operating System	One of the following: • Microsoft Windows Server 2022 • Microsoft Windows Server 2019 • Microsoft Windows Server 2016
Java Runtime Environment Server version (Required when using an external JRE)	Version 21
Browser	One of the following: • Chrome 84 and above. • Edge 84 and above.

COMPONENT	MINIMUM REQUIREMENT
Database	One of the following: • Microsoft SQL Server 2022 • Microsoft SQL Server 2019 • Microsoft SQL Server 2017 The corresponding SQL Express version is also supported for the supported full versions. NOTE: • External databases (for resources, etc.) must accept TLS 1.2 connections. • When creating a database, select the Recovery Model as Simple. Selecting Simple in the Recovery Model prevents the database from running out of free space or filling the disk drive with inactive SQL transaction logs. • SQL Server Express is supported, but not recommended due to the limitations of the maximum size.
Other Software	• (Optional) Interaction Analytics VoiceGrid Version 2.0 with RabbitMQ 3.9 compatibility. This is required for Redaction. See the Data Exchange Framework <i>Voice Grid System Requirements</i> for more information.

Worker Server Requirements

The minimum requirements for a distributed server deployment for Windows are listed in the following table.

COMPONENT	MINIMUM REQUIREMENT
Processor	Four 2 GHz or higher (x64) CPU cores (Intel® Xeon® processor preferred)
RAM	16 GB
Hard Drive	100 GB
Network Interface	1 GB
Operating System	One of the following: • Microsoft Windows Server 2022 • Microsoft Windows Server 2019 • Microsoft Windows Server 2016
Java Runtime Environment Server version (Required when using an external JRE)	Version 21

COMPONENT	MINIMUM REQUIREMENT
Database	One of the following: • Microsoft SQL Server 2022 • Microsoft SQL Server 2019 • Microsoft SQL Server 2017 The corresponding SQL Express version is also supported for the supported full versions. NOTE: • External databases (for resources, etc.) must accept TLS 1.2 connections. • When creating a database, select the Recovery Model as Simple. Selecting Simple in the Recovery Model prevents the database from running out of free space or filling the disk drive with inactive SQL transaction logs. • SQL Server Express is supported, but not recommended due to the limitations of the maximum size.
Other Software	• (Optional) Interaction Analytics VoiceGrid Version 2.0 with RabbitMQ 3.9 compatibility. This is required for Redaction. See the Interaction Analytics <i>Voice Grid System Requirements</i> for more information.
