

NICE Quality Central Insight (QCI) Sunset Announcement

NICE is announcing as of 30 September 2022 the sunset process for NICE Quality Central Insight.

- NICE Quality Central Insight (QCI) is being retired. Customers will have the option to upgrade to Nexidia Analytics with Quality Central or Quality Central with NICE Enlighten AI for Customer Satisfaction (CSAT). Please discuss licensing options with your NICE sales representative.
 - NICE Quality Central with NICE Enlighten for CSAT as an add-on. Enlighten for CSAT is NICE's out-of-the-box AI model that objectively analyzes and scores 100% of agent interactions on key behaviors to transform the customer experience. (Additional services fees to implement Enlighten are required.)
 - Nexidia Analytics and Quality Central enables QCI customers to continue down the analytics-driven approach to quality by allowing them to create unlimited categories (structured queries) for the identification of interactions for review, as well as enhancing the autoscoring of questions in an evaluation form. Full Nexidia Analytics enables comprehensive business performance and agent interaction analytics. Enlighten AI for Customer Satisfaction may also be added to the Nexidia Analytics and Quality Central solution, enabling the most comprehensive AI-driven analysis and quality program possible.
- NICE continues to support customers on QCI v12.3 until its end of life.

Background

Quality Central Insight (QCI) was released for General Availability (GA) in August 2019. QCI is an advanced version of Quality Central leveraging speech analytics to identify calls of interest for targeted testing, as well as using speech analytics to auto-answer questions in an evaluation form, thus driving meaningful operational efficiencies.

Since then, customer needs and expectations have evolved away from using defined, static categories to drive quality programs to using artificially intelligent solutions that can master the identification and measurement of the soft skills that are at the root of the successful delivery of satisfactory customer service interactions. Quality Central coupled with the out-of-the-box metrics of Enlighten AI for Customer Satisfaction represent the future of analytics-driven quality.

Milestones

- End of New Sales – 31 December 2022
- End of Expansion Sales – 30 June 2023
- End of Mainstream Software Support – 30 September 2024
- End of Critical Software Support – 31 December 2024
- End of Service Support– 30 June 2025

For any additional information, contact your NICE sales representative.

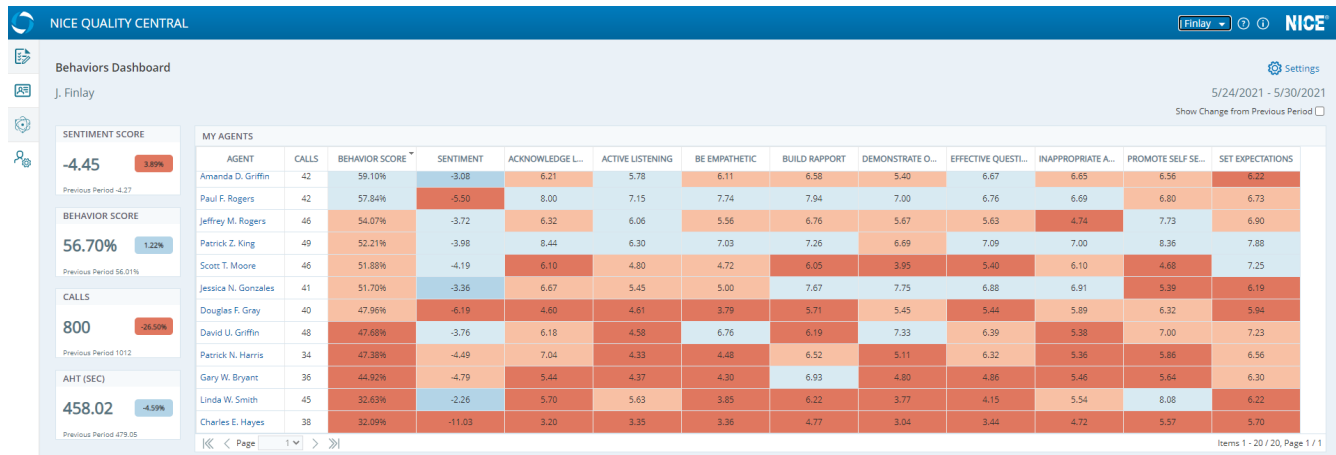

Appendix A – Quality Central + Enlighten for CSAT (add-on)

NICE Quality Central with Enlighten AI for Customer Satisfaction empowers customers to objectively analyze and score 100% of agent's interactions, on every channel, for the key customer experience behaviors listed below:

- Build Rapport
- Active Listening
- Inappropriate Behavior
- Demonstrate Ownership
- Promote Self-Service
- Empathy
- Acknowledge Loyalty
- Effective Questioning
- Set Expectations

Supervisors and/or coaches can track every agent's performance against these behaviors via the Enlighten Portal Dashboard. No longer are teams of people needed to listen to 5-7 interactions per agent per month to score agents on their use of these critical soft skills. What is more, since Enlighten AI is measuring each behavior the exact same way on every interaction, organizations no longer need to spend the time for calibrating reviewers. With these measurements on every interaction, supervisors can quickly identify who needs coaching on which behaviors, thus eliminating the preparation time needed to identify coaching examples.
